Languages and technologies

Python

Flask

Django

JavaScript

SQL

PostgreSQL

Bootstrap

MongoDB

Programs and applications

Visual Studio Code

PyCharm

GitHub

Git

Interests and hobbies

Programming

Technology

Reading

An ambitious developer, interested in the field of technology. I have experience with Python, Flask and Django frameworks, as well as SQL and MongoDB database skills. I completed a number of training projects in a computer science course, including systems development and database management. I am seeking to join a professional team within a prestigious technology company that will enable me to develop my skills and gain more practical experience in the field

Skills

Web application development

I developed a project management website using Django with PostgreSQL and Bootstrap 5, which provides users with the ability to create accounts, add categorized projects, and attach tasks to each project, achieving integrated organization and ease of use

Database design and management

I can design integrated databases that meet systems needs. I created a Postgresql database containing several tables with the relationships between them. They are effectively linked to the system to ensure that elements integrate and communicate seamlessly

Systems analysis

I have experience in carefully analyzing and specifying system requirements, applying algorithms to improve performance, including search and sort algorithms to develop add, delete, and modify functions. Use flow diagrams to illustrate the sequence of operations and interaction between system elements

Develop expertise

I am keen to follow the latest technologies and ongoing developments in the field of technology and the labor market. I completed the computer science course from Hsoub Academy, and I continue to develop my skills by studying the application development course using the Python language
